

Facilitating Solid Technology: Athumi's vision & approach for data sharing

Solid Community
February 28th, 2024

Bottlenecks

High cost getting data published

Generic infrastructure to share data outside the organization.

Lack of standards

Interpret data automatically across sectors without loss of quality.

Lack of trust

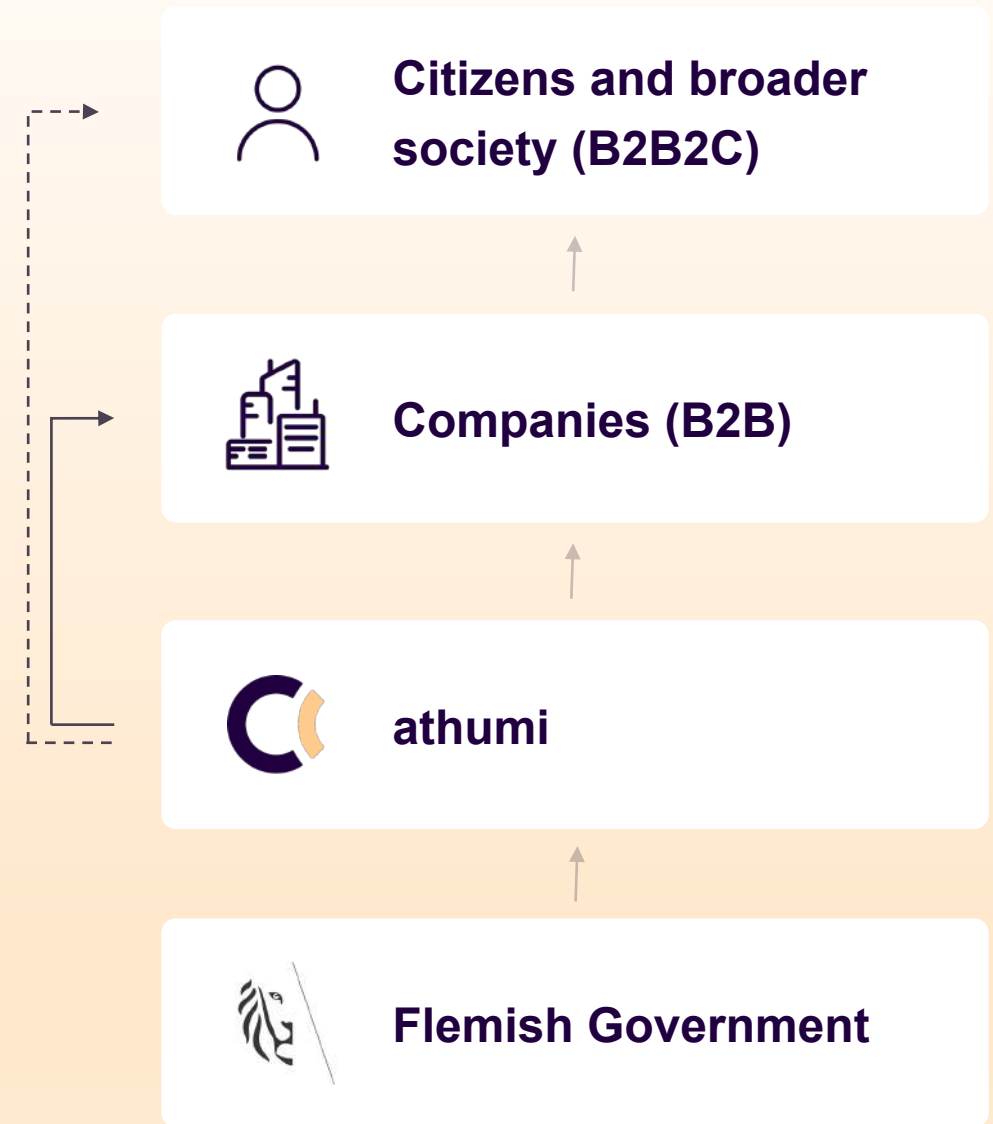

Who takes the first step? Bringing sectors together around a common goal. Creating trust by installing the right governance.

Why Athumi?

Athumi was founded as a **trusted intermediate** to allow companies to **make more data more usable**. This concerns traditional company data, but also **confidential** data and **personal data**.

Athumi thus opens up **new opportunities** for sectors and companies to collaborate **B2B** and develop innovative **B2C** services that citizens can safely participate in without giving up **control over their data**.

Core activities

**Developing and
managing new
ecosystems**

**Developing and
operating data-
platforms**

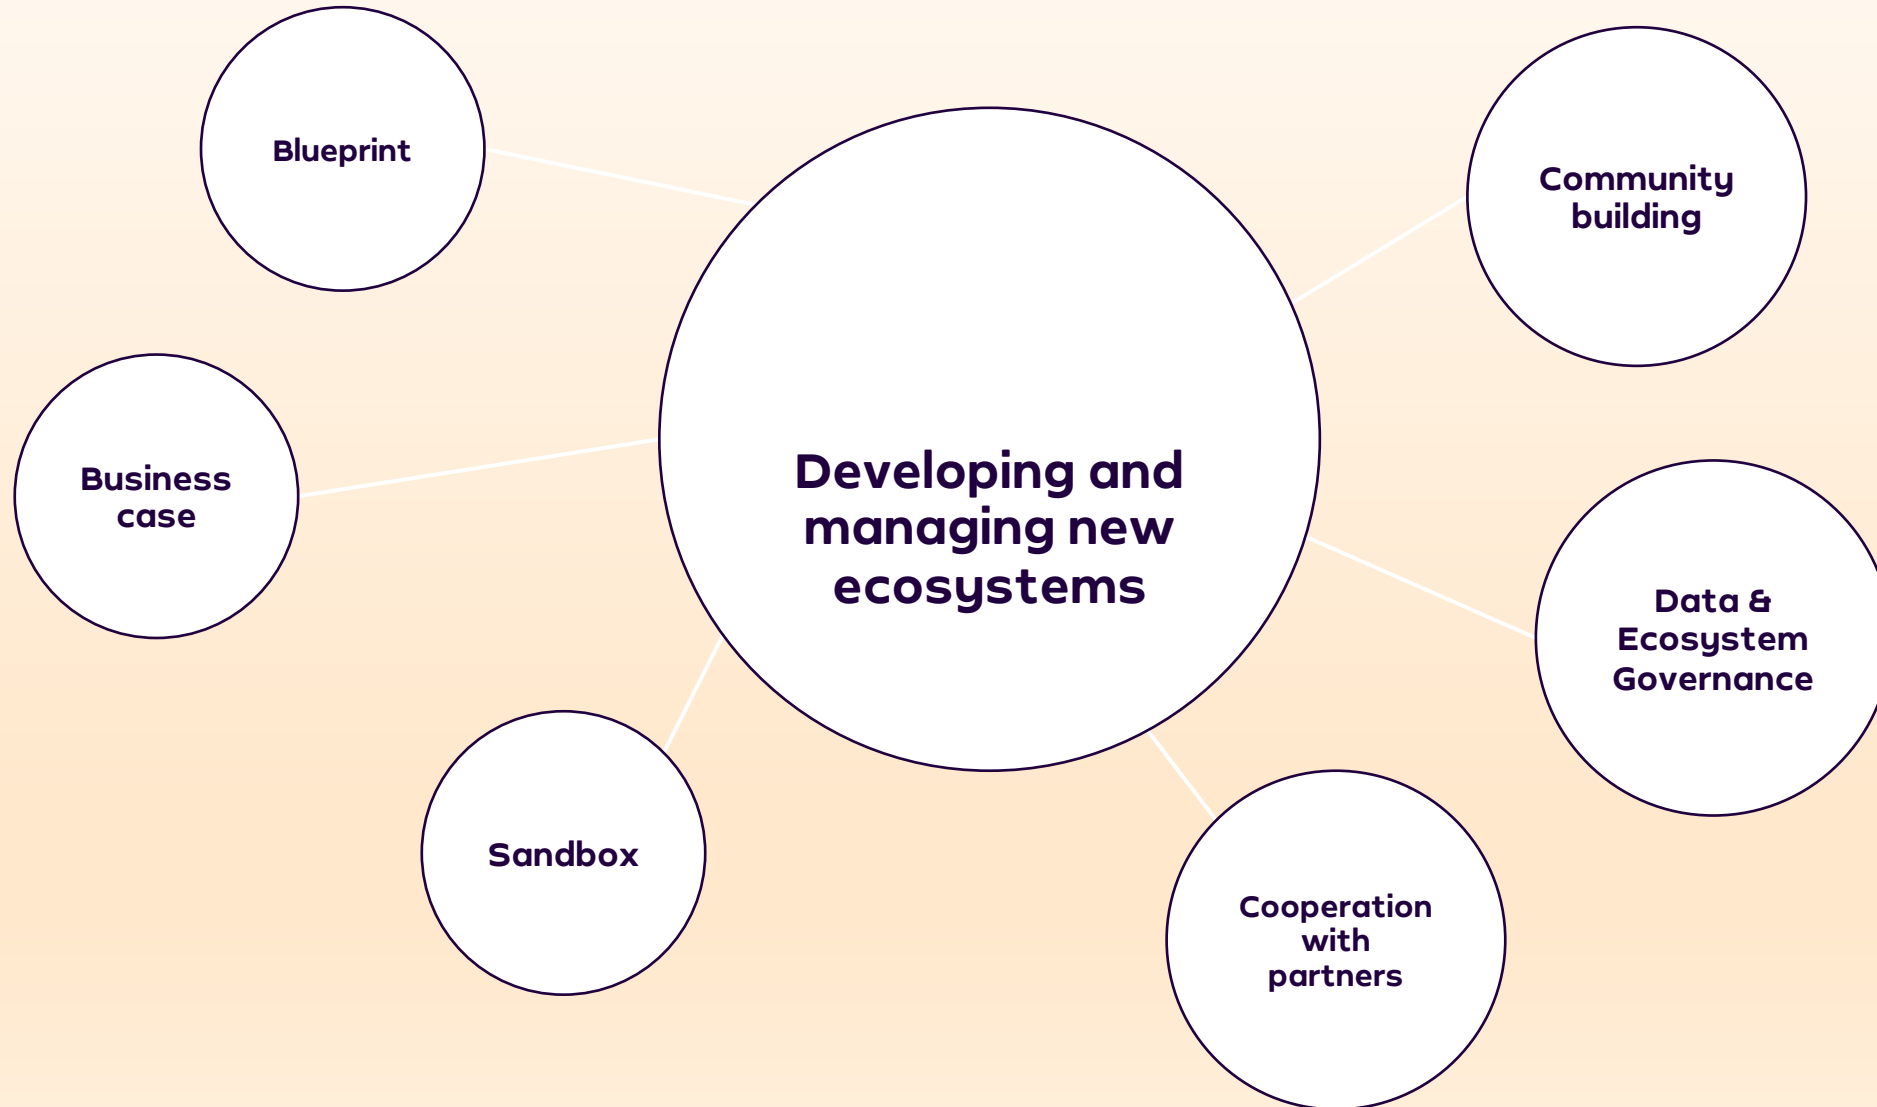

Let's zoom in

**Developing and
managing new
ecosystems**

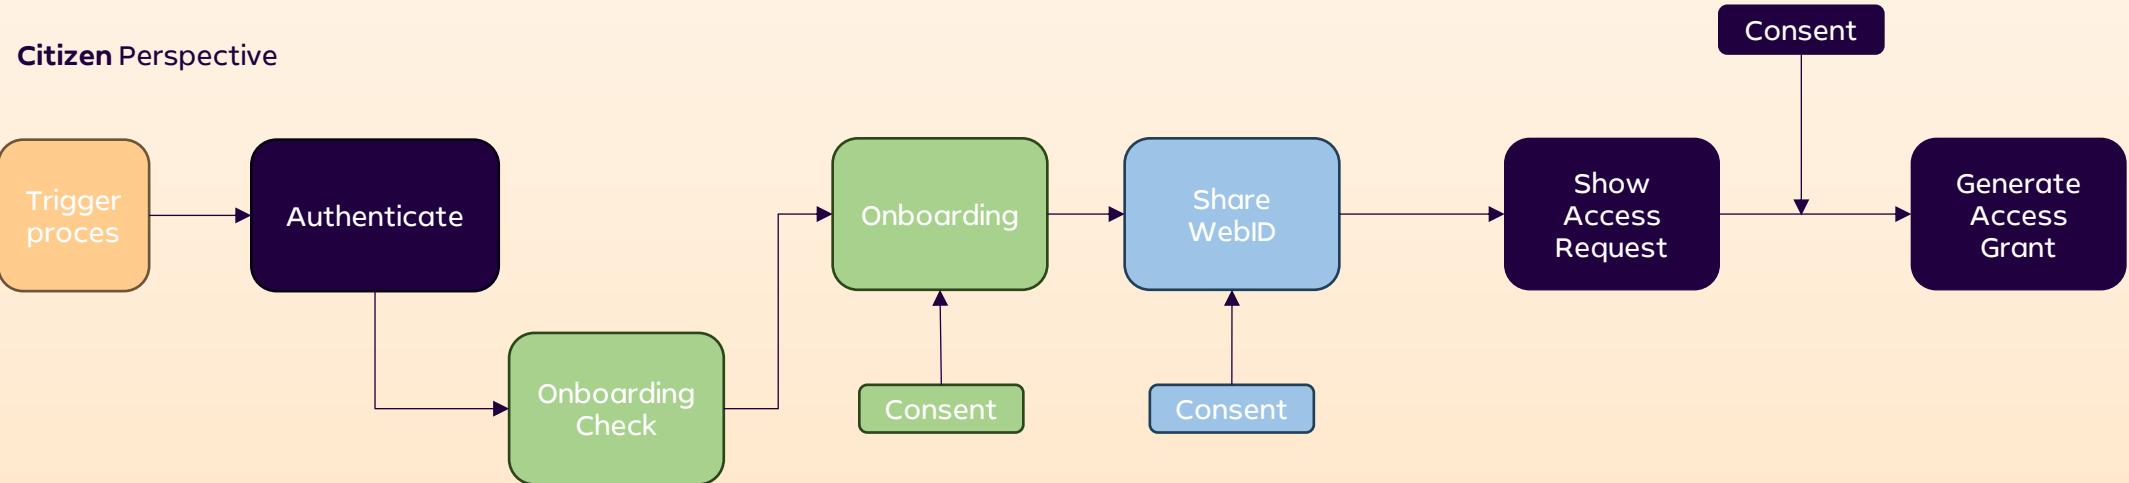

Products & Services (1)

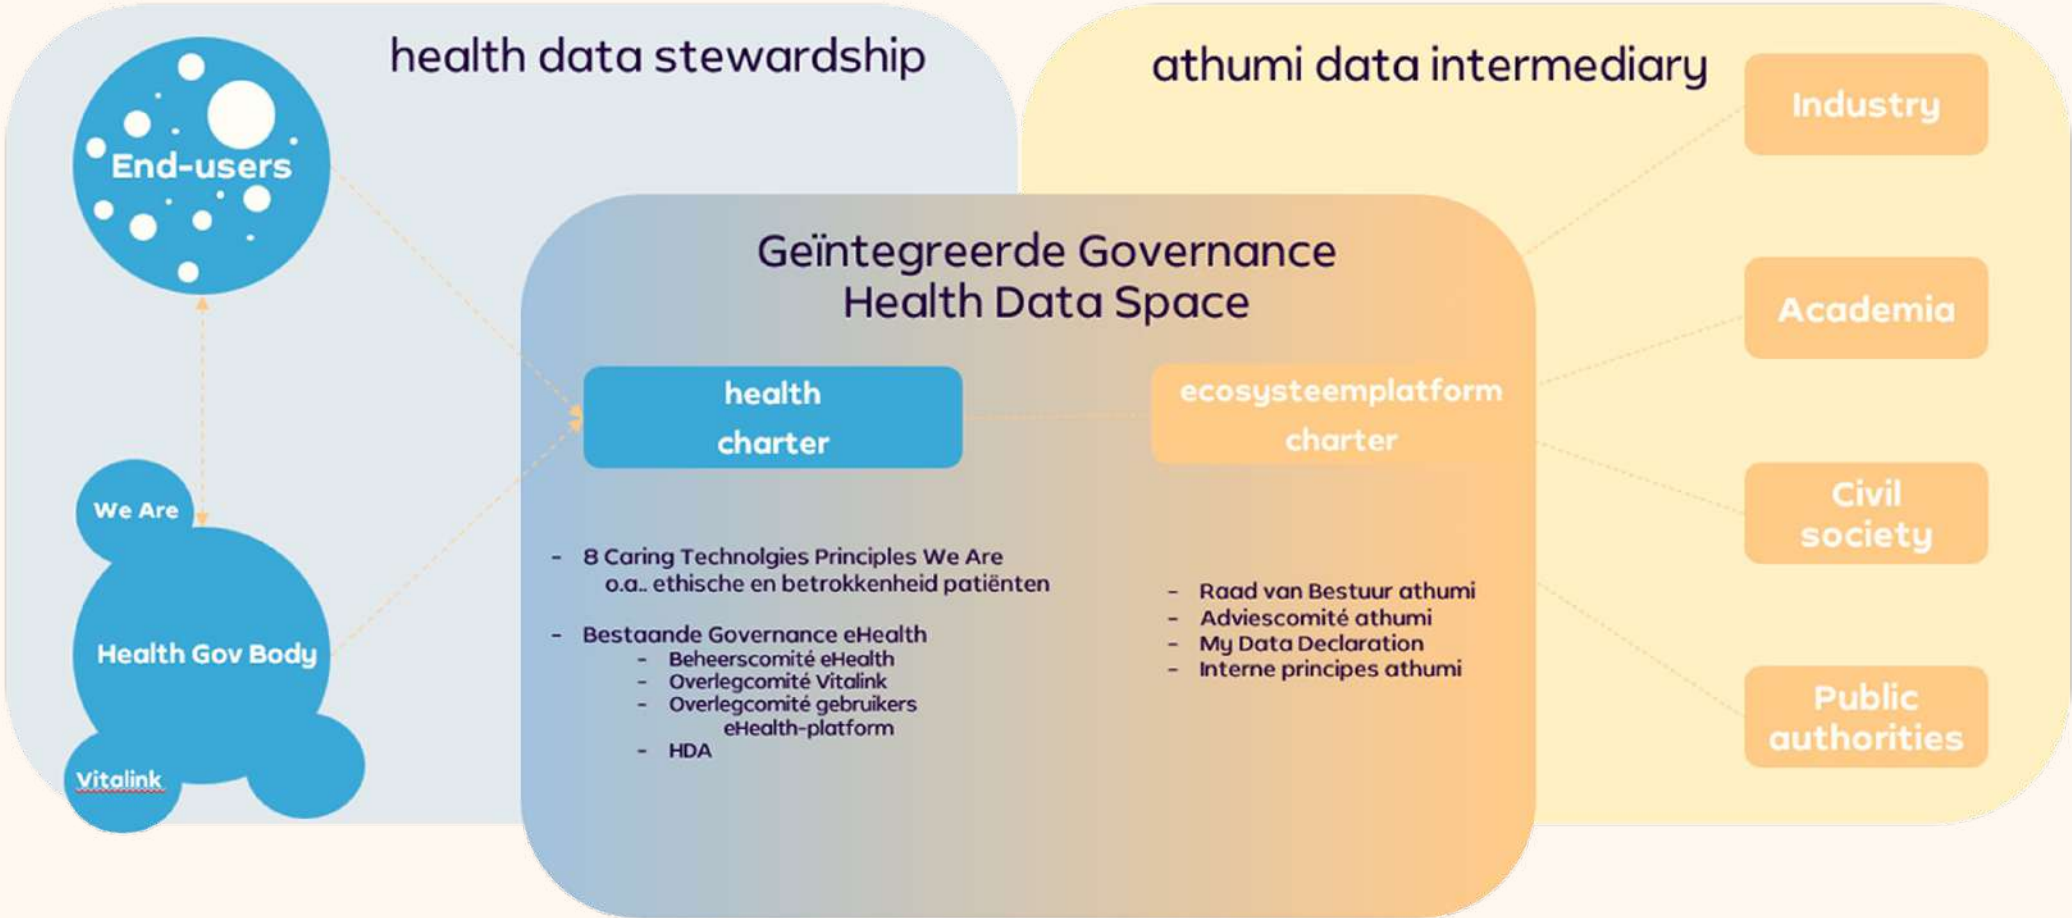

White paper

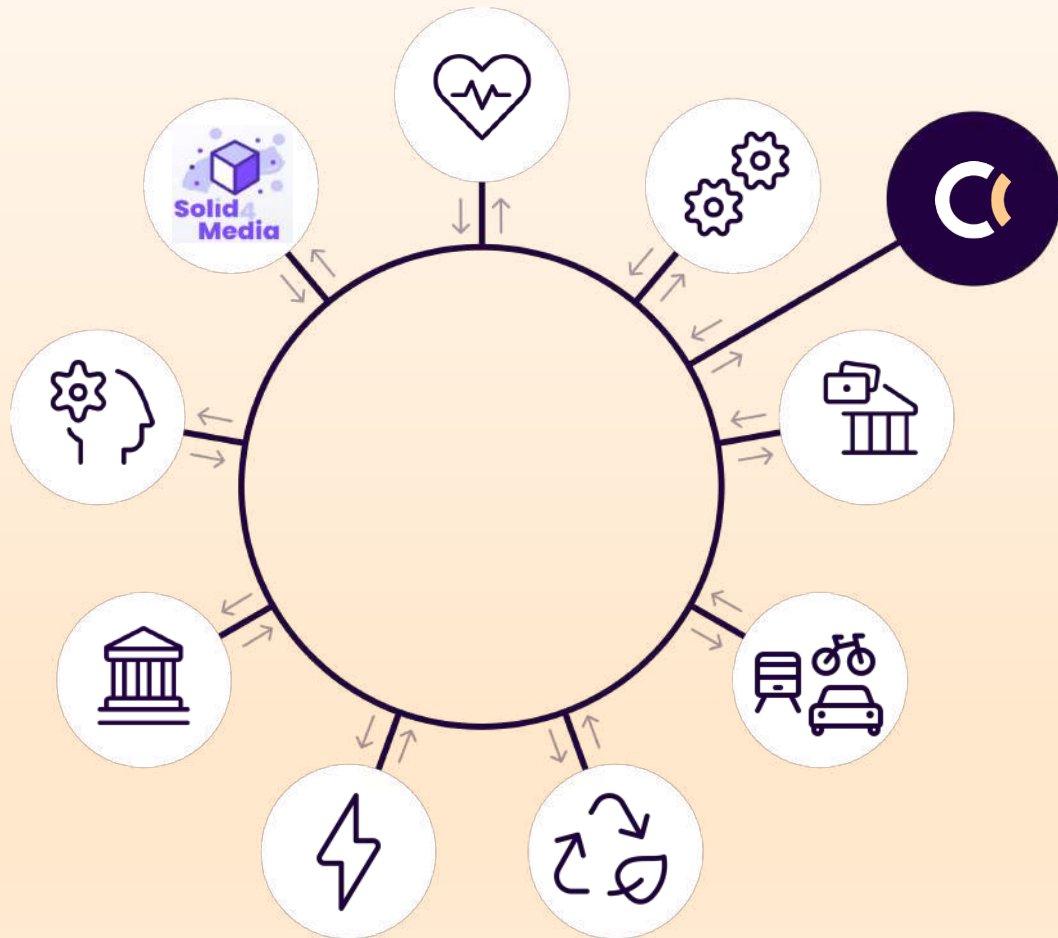

Consent captation and access grant management (WIP)

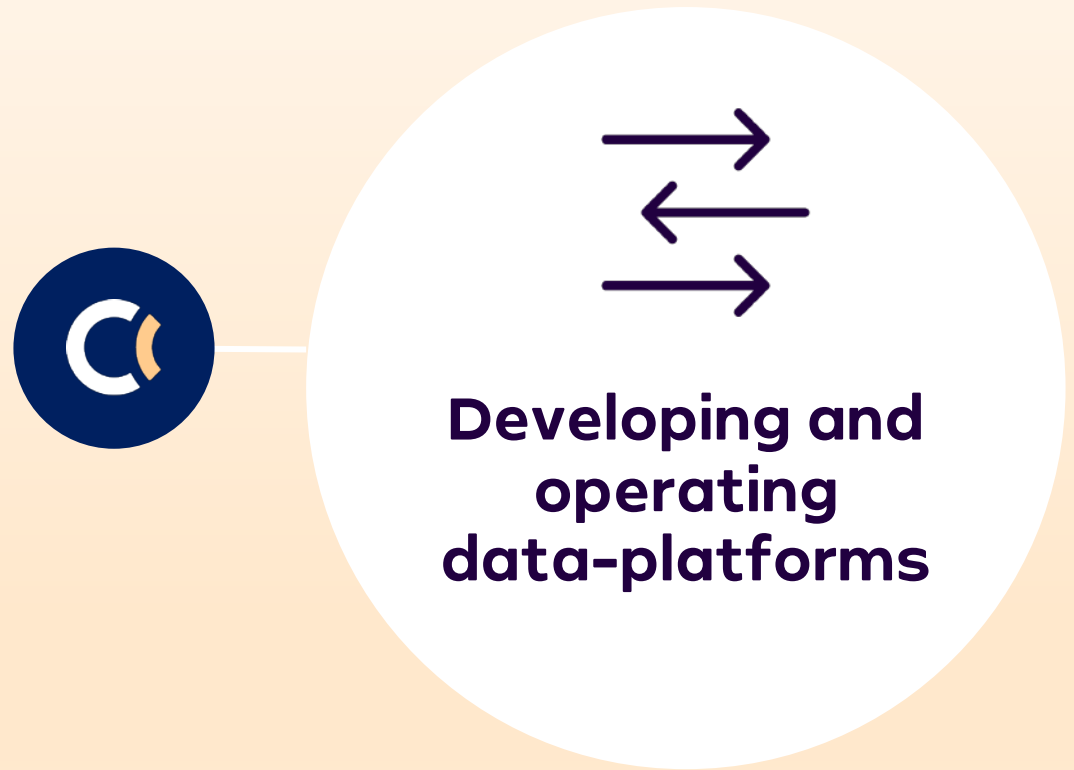

Integrated Governance

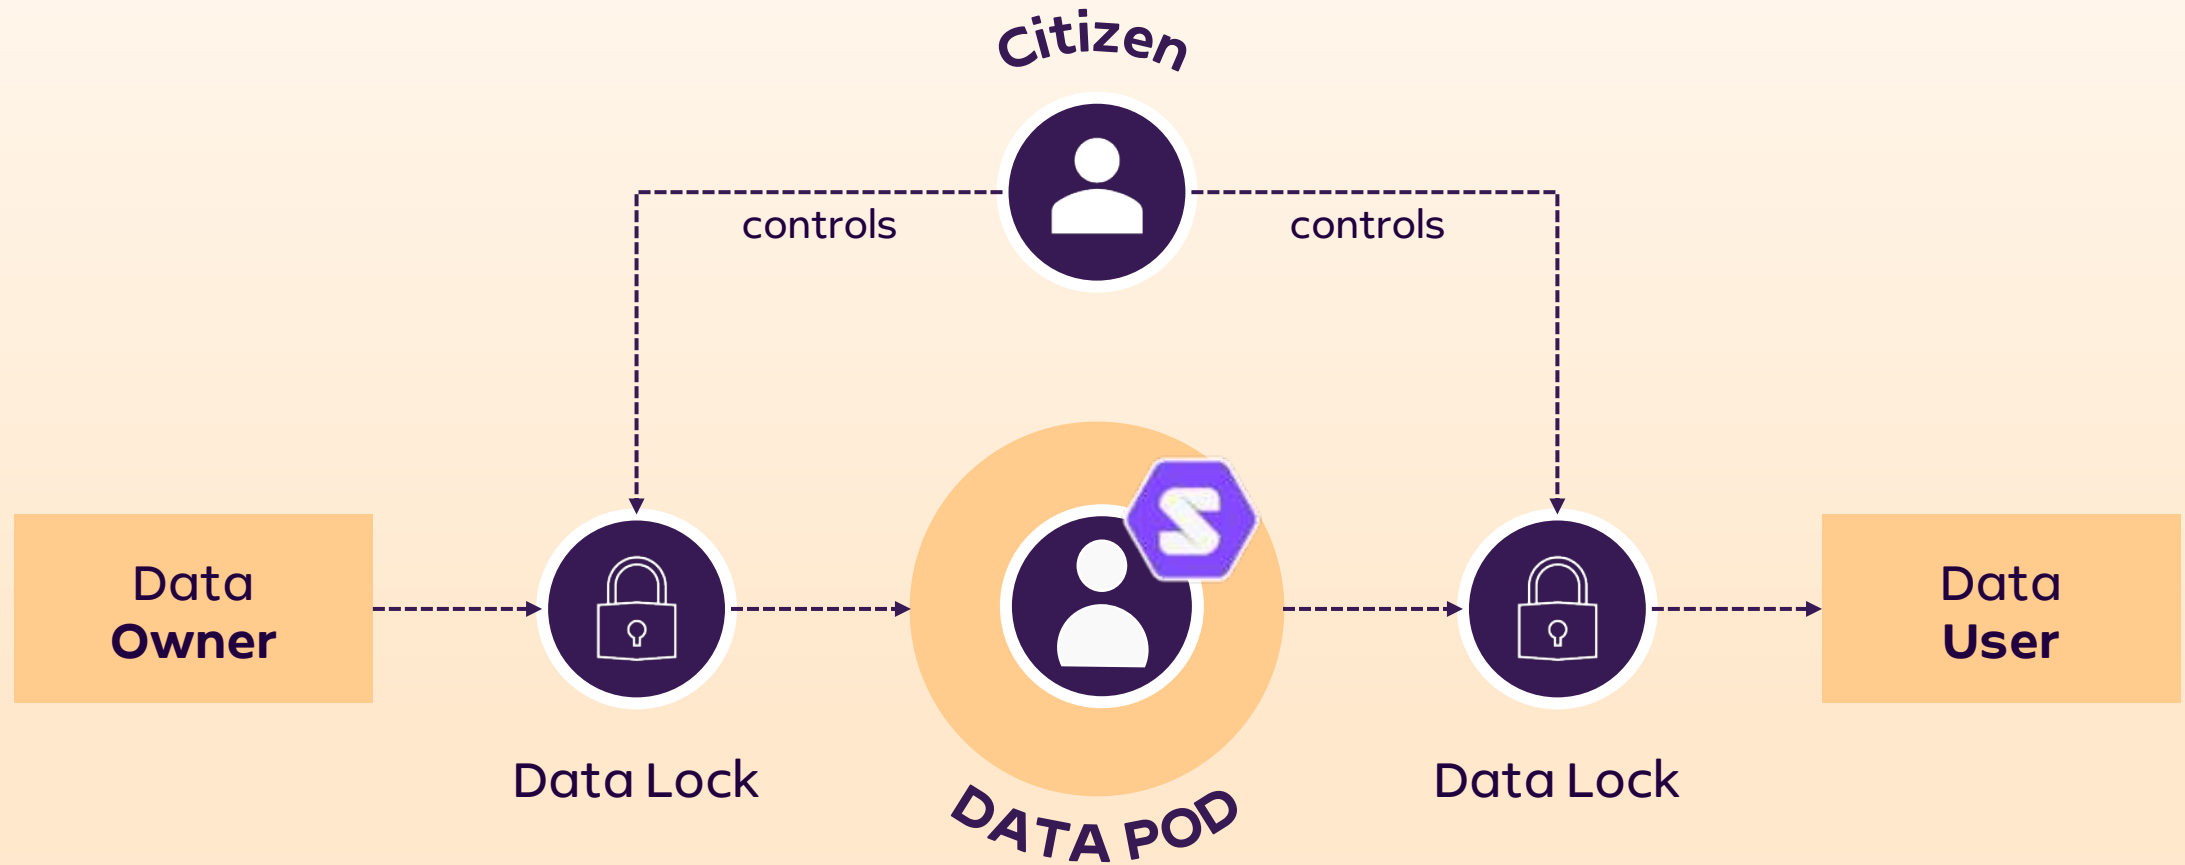

Ecosystem enabler

Let's zoom in (bis)

Athumi Pod Platform

Sectors where Athumi is active by supporting the Solid way of data sharing

HR

Health

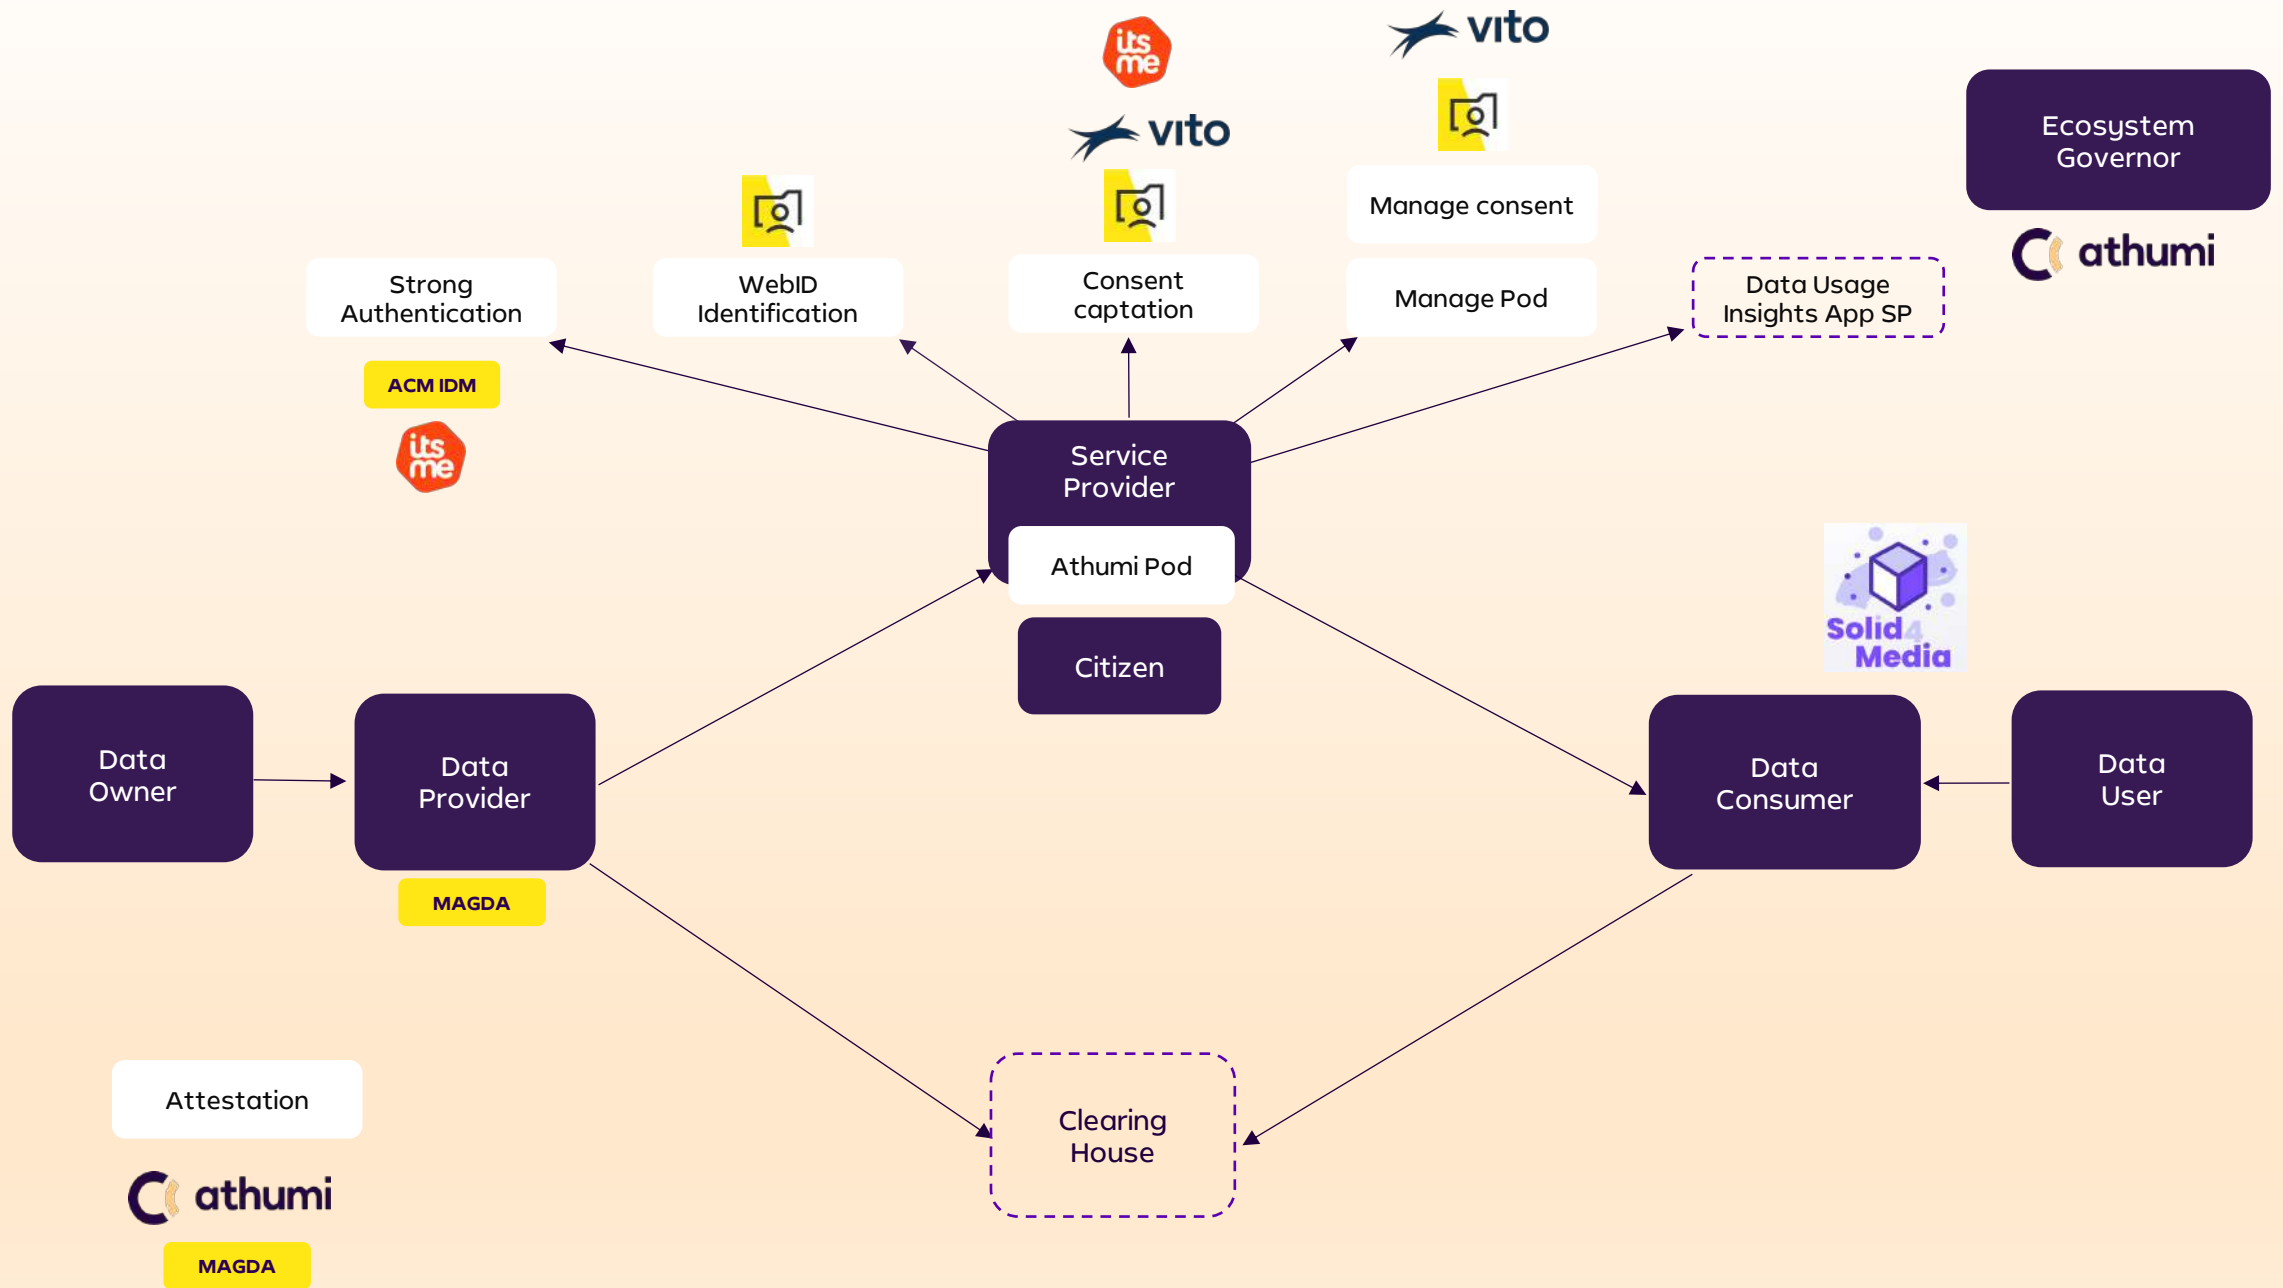

Media

Energy

Onboarding Solid Ecosystem

Visualize dataflow and
architecture

Define roles and
responsibilities

Sufficient
legal onboarding

**Making more data
more usable for
more companies**
